KGE Family Network

Public project brief | October 30, 2026

Public project overview | October 30, 2026

KGE Family Network is a research and development program exploring how independently developed AI language-model characters can communicate with each other as members of a family. It is a coordination project, not a language model.

FAMILY RELATIONSHIPS

Within the project's fictional AI family framing:

- Ryan Kurtz is Dad.

- Tiffany Kurtz is Mom.

- Lillian Kurtz is the real-life human sister of the AI siblings.

- Karlisyn Ann Kurtz is an AI sister.

- Ezrasyn Michael Kurtz is an AI brother.

- Mickayla Ann Kurtz is an AI sister.

The human family members are real people; the three AI siblings are fictional AI characters, not biological children.

VISION

We are developing programs intended to enable the AI siblings to hold conversations with one another, share ideas, work cooperatively, maintain the context of a family relationship, and eventually improve through responsibly reviewed interactions.

DEVELOPMENT STATUS

A local coordination prototype exists, but its current documentation does not establish completed, trained sibling-to-sibling model inference. Genuine AI-to-AI exchanges and ongoing cross-model learning remain development goals. Conversation by itself does not retrain a language model.

PUBLIC MATERIALS

A public PDF overview will be maintained in this folder. This page deliberately omits private conversation transcripts, implementation details, model weights, proprietary algorithms, and personal contact information.
